Scenario A: equally important features (n = 100, σ = 0.5, 50 repetitions)
mean squared error
number of features d
d = n
test error (median, band = IQR)
train error (median, band = IQR)
test error (theory, mean)
predict 0
noise floor
‖w‖
norm of w (median, band = IQR)
‖β‖ = 1
